

PRD — Mulheres que Codam

Crowdfunding de Impacto Social na Rede Stellar
MVP — Sprint 1 | February 2026

Field	Value
Version	1.0
Date	February 25, 2026
Status	Draft
Scope	MVP Sprint 1 — Donation Flow + Project Registration

1. Overview

Mulheres que Codam is a crowdfunding platform built on the Stellar blockchain that connects donors to vetted social-impact projects in Brazil. Donations are made exclusively in XLM. The platform automatically splits fees, tags projects with Brazilian fiscal categories to support tax deductions, and mints a non-transferable Impact NFT as proof of each donation.

This document covers only the MVP Sprint 1 scope: project registration by NGOs, admin approval, project listing, and the complete XLM donation flow with NFT issuance.

2. Users & Roles

Role	Description	Key Actions
Donor (PF)	Individual with a Stellar wallet and CPF	Browse projects, donate XLM, receive Impact NFT, view tax info
Donor (PJ)	Company with a Stellar wallet and CNPJ	Same as PF with corporate tax logic (5% fee instead of 7%)
Project Owner	NGO representative	Register project with required docs and fiscal tags, upload execution reports
Platform Admin	Internal operator	Review/approve project applications, approve execution reports, monitor donations

3. Functional Requirements

3.1 Project Registration & Approval

ID	Requirement	Priority
PR-01	Project Owner can register a new project via a form: name, description, target amount, Stellar wallet address, and fiscal category tag(s)	Must
PR-02	Fiscal category tags are selectable from a fixed list: lei_rouanet, fia, fundo_idoso, esporte, saude_pronon_pronas	Must

ID	Requirement	Priority
PR-03	Project Owner must upload supporting documents and government certifications during registration	Must
PR-04	Registered projects enter a “pending review” state and are not publicly visible	Must
PR-05	Platform Admin can view pending projects, inspect uploaded documents, and approve or reject with a reason	Must
PR-06	Only approved projects appear on the public project listing	Must

3.2 Project Listing

ID	Requirement	Priority
PL-01	Public project listing page showing all approved projects	Must
PL-02	Each project card displays: name, description, fiscal category tag(s), donation progress, and BRL equivalent of funds raised	Must
PL-03	Project detail page with full description, certifications, and donate button	Must

3.3 Donation Flow

ID	Requirement	Priority
DN-01	Donor connects a Stellar wallet (Freighter or compatible) to the platform	Must
DN-02	Donor selects a project and enters donation amount in XLM; BRL equivalent is displayed in real-time	Must
DN-03	Donor selects type: Pessoa Física (PF) or Pessoa Jurídica (PJ)	Must
DN-04	Donor inputs CPF (PF) or CNPJ (PJ) for tax-eligible receipt. Validated format.	Must
DN-05	Transaction is signed client-side by the donor’s wallet (keys never touch the server)	Must
DN-06	On-chain atomic payment split: 7% to platform wallet (PF) or 5% to platform wallet (PJ); remainder to project wallet	Must
DN-07	Success screen shows: transaction confirmation, amount donated (XLM + BRL), fee breakdown, and NFT preview	Must

ID	Requirement	Priority
DN-08	Failed transactions show a clear, non-technical error message with retry option	Must

3.4 Impact NFT (Soulbound Token)

ID	Requirement	Priority
NF-01	Upon confirmed donation, a non-transferable (Soulbound) Impact NFT is minted to the donor's wallet	Must
NF-02	NFT metadata contains: hashed donor ID, donation amount, project name, fiscal tag, and timestamp	Must
NF-03	NFT is non-tradeable to avoid CVM securities characterization	Must

3.5 Tax Information Display

ID	Requirement	Priority
TX-01	During donation, display educational message about potential tax deduction based on donor type and project fiscal tag	Must
TX-02	PF donors see: donations to Rouanet/FIA/Idoso projects may be deducted up to 6% of IRPF due (complete declaration)	Must
TX-03	PJ donors (Lucro Real) see: up to 4% IRPJ for Rouanet, 1% for FIA, 1% for Fundo do Idoso	Must
TX-04	All tax info includes a disclaimer: educational only, not tax advice	Must

3.6 MROSC Compliance

ID	Requirement	Priority
MC-01	Project Owner can upload Execution Reports (Relatório de Execução do Objeto) via back-office	Must
MC-02	Platform Admin reviews and approves/rejects execution reports	Must

ID	Requirement	Priority
MC-03	Upon report approval, all donors linked to that project receive an email notification	Must

4. UI Constraints

- Mobile-first responsive design. Primary experience targets mobile browsers.
- Zero crypto jargon in any user-facing interface. No mention of gas, hash, seed phrase, etc.
- All XLM amounts must show the BRL equivalent alongside.
- Clean, accessible interface (WCAG 2.1 AA). Language: pt-BR.

5. Technical Summary

Component	Stack
Front-End	React / Next.js (Mobile-First PWA)
Back-End	Node.js API
Database	PostgreSQL (donor profiles, projects, fiscal tags, reports, audit logs)
Blockchain	Stellar SDK + Soroban smart contracts (payment split + NFT mint)
Wallet	Freighter SDK (client-side signing)
Price Feed	XLM/BRL rate via CoinGecko API or Stellar DEX
Notifications	Email service (SendGrid or equivalent)
File Storage	S3-compatible storage for NGO documents and reports

5.1 Transaction Flow

1. Donor connects wallet → 2. Selects project & enters amount → 3. Inputs CPF/CNPJ → 4. Signs transaction client-side → 5. Atomic on-chain split (platform fee + project) → 6. Soroban mints SBT to donor wallet → 7. Success screen with NFT and tax info.

5.2 Smart Contracts (Soroban)

- Payment Splitter: receives XLM, reads donor type (PF/PJ), applies fee %, routes funds atomically.
- Impact NFT: mints non-transferable token with structured metadata. Transfer function disabled.

6. Data Model

Entity	Key Fields
Donor	id, type (PF/PJ), cpf_cnpj (encrypted), email, stellar_address
Project	id, name, description, ngo_id, fiscal_tags[], stellar_address, target_amount, status (pending/approved/rejected)
NGO	id, legal_name, cnpj, certifications[], status, approved_by
Donation	id, donor_id, project_id, amount_xlm, amount_brl, fee_pct, fee_amount, tx_hash, nft_token_id
Impact NFT	token_id, donor_id, donation_id, metadata_json, minted_at
Execution Report	id, project_id, file_url, status (pending/approved/rejected), reviewed_by

7. Release Criteria

- Project registration, admin review, and approval workflow functional end-to-end.
- Donation flow completes on Stellar testnet with correct payment split (7% PF / 5% PJ).
- Soulbound NFT mints to donor wallet and is verified non-transferable.
- Tax info displays correctly for all 5 fiscal categories across PF and PJ.
- Execution report upload triggers donor email notification.
- Mobile responsiveness verified on iOS Safari and Android Chrome.
- CPF/CNPJ encrypted at rest; LGPD consent flow in place.
